#### Key Performance and Risk Metrics Since Inception

The Omega Ratio is the sum of the monthly returns above the risk-free rate divided by the sum of the absolute value of the returns below it. The Omega Ratio is the academic version of Jack Schwager's Gain-to-Pain Ratio featured in his *Hedge Fund Market Wizards* book (2012). Omega offers an investor friendly mathematical assessment of risk and reward by considering the entire return distribution. Crescat believes that the Omega Ratio is a superior measure for aligning with investor risk versus return preferences compared to the more popular Sharpe Ratio because the Omega Ratio does not penalize upside volatility.

The Annualized Return measures the average yearly growth of an investment, accounting for compounding. It provides a consistent way to compare performance across different timeframes and return patterns. While useful for assessing long-term trends, it should be considered alongside risk-adjusted metrics like the Omega Ratios for a complete view of a fund's performance.

The Downside Capture Ratio ("DCR") is a measure of the manager's performance in down markets relative to the market itself. A value of 90 suggests the manager's loss is only nine tenths of the market's loss during the selected time period. A market is considered down if the return for the benchmark is less than zero. The Downside Capture Ratio is calculated by dividing the return of the manager during the down market periods by the return of the market during the same periods. Generally, the lower the DCR, the better (If the manager's DCR is negative, it means that during that specific time period, the manager's return for that period was actually positive).

#### Performance

Past performance is not indicative of future results. Net returns reflect the performance of an investor who invested from inception and is eligible to participate in new issues. Net returns reflect the reinvestment of dividends and earnings and the deduction of all expenses and fees (including the highest management fee and incentive allocation charged, where applicable). An actual client's results may vary due to the timing of capital transactions, high watermarks, and performance. Performance should not be considered indicative of the skill of Crescat, and clients may experience a loss. The Global Macro Fund comprises Crescat's most versatile portfolio strategy with exposure to all of Crescat's macro themes. The strategy invests globally across equities, commodities, fixed income securities and currencies. The strategy employs both long and short positions and may use leverage. Positioning is determined largely by Crescat's proprietary multi-factor macro and fundamental equity quant models, with the goal of identifying and capitalizing on secular trends. Positioning is adjusted on a discretionary basis using Crescat's thematic investment framework. The strategy typically invests across five to ten macro themes at any one time. In addition. the Global Macro Fund following its friendly activist investment strategy in the precious metals mining industry as just one of its thematic components. Risks related to this strategy are described in the Global Macro Fund's private placement memorandum.

#### Benchmarks

The **S&P 500 Index is** perhaps the most commonly followed stock market index. It is considered representative of the US stock market at large. It is a market-cap-weighted index of the 500 largest and most liquid companies listed on the NYSE and NASDAQ exchanges. While the companies are U.S. based, most of them have broad global operations. Therefore, the index is representative of the broad global economy. It is a suitable benchmark for the Crescat Global Macro Hedge Fund Composite which has also traded extensively in large, highly liquid global equities through U.S.-listed securities.

The **HFRX Global Hedge Fund Index** represents a broad universe of hedge funds with the capability to trade a range of asset classes and investment strategies across the global securities markets. The index is weighted based on the distribution of assets in the global hedge fund industry. It is a trade-able index of actual hedge funds. It is a suitable benchmark for Crescat's Global Macro Hedge Fund Composite which has also traded in multiple asset classes and applied a multi-disciplinary investment process since inception.

Returns for the S&P 500 Total Return Index and HFRX Global Hedge Fund Index include the reinvestment of income and do not include transaction fees, management fees or any other costs. The performance and volatility of the funds will be different than those of the indexes. Benchmarks are provided to represent the investment environment in existence during the time periods shown.

### **Private Securities Offering Legend**

Only accredited investors and qualified clients will be admitted as limited partners to a Crescat fund. For natural persons, investors must meet SEC requirements including minimum annual income or net worth thresholds.
